

DJ Dinnebeil

Software Engineer | Full-Stack & AI Applications

Backend-focused engineer building APIs, data workflows, and AI-powered tools from design through deployment.
408-493-0402 | djdinn11@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, SQL, C++, C, HTML/CSS
Backend & APIs: FastAPI, Flask, REST APIs, Node.js, Express
Frontend: React, Redux, Vite, Streamlit, Jinja2
Databases: PostgreSQL, MariaDB, SQLite
Infrastructure & Tools: Linux, Docker, AWS S3
AI & Retrieval: LangGraph, LangChain, Qdrant, LLM APIs, RAGAS

PROJECT EXPERIENCE

KDAK Properties | PHP, MariaDB | [Live Site](#)

Freelance full-stack platform for a residential property management company.

- Developed and deployed a full-stack property management platform with a role-based admin dashboard and tenant portal for rent payments, lease access, maintenance requests, and payment history.
- Designed administrative tooling for tenant account management, payment review, maintenance requests, and visitor and admin activity tracking to improve oversight and security.
- Automated processing of bank and payment notifications from a dedicated inbox using scheduled cron jobs to update tenant payment history for online and cash transactions.
- Established a containerized local development workflow with Docker and DDEV and managed deployment via cPanel to support reliable iteration and continued expansion.

Historical Research Assistant | Python, LangGraph, Qdrant | [GitHub](#)

AI-powered research assistant for historians to search, analyze, and validate source materials.

- Engineered an AI-powered research application for historians to upload, organize, and query primary and secondary source documents across multiple projects.
- Designed a processing pipeline to parse source files, generate embeddings, and store searchable vectors in Qdrant to support semantic and context-aware retrieval.
- Developed RAGAS-based evaluation workflows and used Cohere semantic scoring to improve response accuracy, search relevance, and query-to-document alignment.

Auto Core | C++, Win32 API, SQLite | [GitHub](#)

Windows utility for streamlining task execution and desktop automation.

- Built a keyboard manager in C++ with the Win32 API to intercept key events and execute user-defined commands for taskbar navigation, text insertion, and custom shortcuts.
- Implemented a modular component architecture with named-pipe communication and SQLite/Firebase-backed storage for runtime configuration, personalization, and user-specific data management.
- Optimized runtime key-mapping performance through configurable execution modes, reducing per-call overhead from 75–95 μ s with file-based key mappings to 0.20–0.35 μ s with hardcoded key mappings.

MILITARY EXPERIENCE

United States Coast Guard Reserve

June 2007 – April 2013

Electronics Technician

- Performed preventive and corrective maintenance on electronic systems in coordination with end users.
- Awarded the Exceptional Merit Award for technical excellence, dependability, and support of team operations.

EDUCATION

App Academy – Software Engineering Certificate

June 2024 – December 2024

AI Makerspace – AI Engineering Certificate

May 2025 – September 2025

Stockton University – B.S. in Computer Science, M.A. in American Studies

August 2015 – August 2022

Honors: Certificates of Distinction in Honors and Service; Distinguished Research Fellowship
