

DJ Dinnebeil

Software Engineer | Full-Stack & AI Applications

Backend-focused software engineer building APIs, data workflows, and AI-powered applications.
Experienced in taking projects from system design and implementation through deployment and iteration.
408-493-0402 | djdinn11@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

TECHNICAL SKILLS

Languages: Python, JavaScript, PHP, SQL, C++, C, HTML/CSS
Backend: FastAPI, Flask, Node.js, Express, REST APIs
Databases: PostgreSQL, MariaDB, SQLite, Qdrant
AI & Retrieval: LangChain, LangGraph, RAG, RAGAS, LLM APIs
Frontend & UI: React, Redux, Vite, Streamlit, Jinja2
Infrastructure & Tools: Git, Linux, Docker, AWS S3, Firebase, DDEV, cPanel

PROJECT EXPERIENCE

KDAK Properties | PHP, MariaDB, Docker/DDEV, cPanel | [Live Site](#)

Freelance full-stack platform for a residential property management company.

- Developed and deployed a role-based property management platform with admin and tenant portals for rent payments, lease access, maintenance requests, and payment history.
- Built administrative tools for tenant account management, payment review, maintenance workflows, visitor tracking, and admin activity logging to improve operational oversight and security.
- Automated rent payment tracking with scheduled cron jobs that process bank notifications from a dedicated inbox and update tenant payment histories for online and cash transactions.
- Containerized the local development workflow with Docker/DDEV and managed production deployment to support reliable iteration and ongoing feature expansion.

Historical Research Assistant | Python, LangChain, Qdrant, RAGAS | [GitHub](#)

AI-powered research assistant for evidence-based document retrieval, evaluation, and source validation.

- Built a document-grounded RAG application for ingesting, indexing, and querying historical source materials.
- Designed a context-aware retrieval pipeline for file parsing, embedding generation, metadata handling, and Qdrant-backed semantic search with optional web search for cross-verification.
- Developed evaluation and reranking workflows using RAGAS and Cohere to improve retrieval relevance, answer grounding, and query-to-document alignment.

Auto Core | C++, Win32 API, SQLite, Firebase | [GitHub](#)

Windows utility for streamlining task execution and desktop automation.

- Built a C++ keyboard automation utility with the Win32 API to intercept key events and execute user-defined commands for taskbar navigation, text insertion, and custom shortcuts.
- Implemented a modular component architecture with named-pipe communication, SQLite-backed local storage, and Firebase sync for runtime configuration and cross-device user settings.
- Optimized key-mapping performance through configurable execution modes, reducing per-call overhead from 75–95 μ s with file-based mappings to 0.20–0.35 μ s with hardcoded mappings.

MILITARY EXPERIENCE

United States Coast Guard Reserve

Jun 2007 – Apr 2013

Electronics Technician

- Maintained and troubleshooted electronic systems to ensure operational readiness.
- Earned the Exceptional Merit Award for technical excellence and unit support.

EDUCATION

App Academy — Software Engineering Certificate

Jun 2024 – Dec 2024

AI Makerspace — AI Engineering Certificate

May 2025 – Sep 2025

Stockton University — B.S. Computer Science; M.A. American Studies

Aug 2015 – Aug 2022

Honors: Certificates of Distinction in Honors and Service; Distinguished Research Fellowship
